

Storage buys time.

How long can storage cover a constant flow shortfall?

At a 40-cfm shortfall:

80 gal provides 21.8 s; 120 gal provides 32.7 s.

Time scales with storage volume and usable pressure band.

Illustrative inputs · constant-temperature ideal-gas inventory

Flow reference: 1 atm, 20°C · tank: 20°C · pressure band: 20 psi
